DragonBall Finance

Whitepaper

What is DragonBall Finance?

First fully decentralized all-in-one DeFi platform on Binance Smart Chain that implements the DragonBall theme.

Initial liquidity raised through IDO on Saltswap Launchpad.

Key Features:
- Layered Farming
- NFTs
- Lottery
- Migrator Contract Removed
- Timelock Contract
- Audits

We view this project from a long-term perspective, with plans to implement new features along the way to ensure sustainability

Tokenomics

DBALL = DragonBall Finance Native Token

Initial Supply: 410,000 DBALL
Max Supply: Unlimited
DBALL/block: Initial: 5 DBALL/block
             1st Reduction: 3 DBALL/block
             Final Reduction: 1 DBALL/block

IDO Price: 1 BNB = 500 DBALL
IDO Allocation: 25,000/250,000 DBALL
Soft Cap/Hard Cap: 50/500 BNB
     30% raised funds to provide initial liquidity
     60% raised funds used for development
     10% SaltSwap IDO Launchpad fee
All unsold tokens from IDO will be burnt

Listing Price: 1 BNB = 400 DBALL

Tokenomics

DBALL is the native token for the entire protocol and will be used to reward users for interacting with the farms, pools and providing liquidity.

Non-native farms & pools carry a 3% deposit fee, which will go to buyback & burn DBALL.

ALL farms & pools (native/non-native) carry a 2% withdrawal fee which will go to buyback & burn DBALL

Fee Structure:
50% to buyback & burn DBALL
50% for development expenses and future projects

Layered Farming

A new high-risk high-reward concept of perpetual farming. Each week, a new layer is launched and users are able to earn SENZU.

Tokenomics:
SENZU = DragonBall Finance Layered Token
Total Supply: 7,000 SENZU
Rewards/block: .04 SENZU

ALL farms & pools (native/non-native) carry a 7% deposit fee which will go to buyback & burn DBALL & SENZU

Fee Structure:
40% Buyback & burn DBALL
40% Buyback & burn SENZU
20% development expenses and future projects
